Description

See [Verilog Translator Options](#)

The option sets the library file that declares names of non-standard system tasks and functions. The file has the following structure:

```
<kind> (<type>)? <name>
...
<kind> (<type>)? <name>
```

where

- <kind> is either function or task;
- <type> is the return type (only for functions);
- <name> is the entity name.

Here is an example:

```
function [3:0] $myFunction
task $myTask
```

History
