

Klever - Feature #8706

Permanent (pretty) URLs for error traces

02/06/2018 03:23 PM - Vadim Mutilin

Status: Closed	Start date: 02/06/2018
Priority: Urgent	Due date:
Assignee: Vladimir Gratinskiy	% Done: 0%
Category: Bridge	Estimated time: 0.00 hour
Target version: 1.0	
Published in build:	
Description We need to have a permanent ("pretty") URL for error traces which will not be changed during downloading/uploading job archives. I think that for that purpose we can use job names provided by the users (seems that we need to enforce uniqueness of them) and a error trace number relative to the given job (it should be kept during downloading/uploading job archives).	
Related issues: Blocked by Klever - Feature #8754: Require unique job names Closed 03/13/2018 03/14/2018	

History

#1 - 02/06/2018 04:21 PM - Evgeny Novikov

- Target version set to 2.0
- Description updated

#2 - 02/07/2018 01:23 PM - Vladimir Gratinskiy

What does "launch names" mean? Identifiers of jobs? I didn't know that users can provide jobs identifiers.

and a error trace number relative to the given job (it should be kept during downloading/uploading job archives).

It can't be kept. I will use identifiers specified in error trace json file (comments for "error traces" in <https://docs.google.com/document/d/1tLOsqCQxMRIDvSNXFmaGOSQqL8PORNl-BEsfZP8hoQ/edit>). So the link will be like "/reports/unsafe/<32-bit error trace identifier>".

What does "launch names" mean? Identifiers of jobs? I didn't know that users can provide jobs identifiers.

I fixed the issue description. It's about job names. And it does have sense to make them unique globally, but this is responsibility of an user.

and a error trace number relative to the given job (it should be kept during downloading/uploading job archives).

It can't be kept. I will use identifiers specified in error trace json file (comments for "error traces" in https://docs.google.com/document/d/1tL_OsqCQxMRIDySNXFmaGOSQqll_8PORNl-BEsfZP8hoQ/edit). So the link will be like "/reports/unsafe/<32-bit error trace identifier>".

I don't understand why this is necessary for the specified issue. Indeed Bridge can generate and use such the identifiers itself since they are required just for permanent and unique identification of error traces within various instances of Bridge (databases). Perhaps your approach can be helpful for debugging, e.g. when Bridge fails to visualize a given error trace and the developer needs to find it out somewhere in a Core working directory. But I guess that it isn't very necessary (I didn't remember the case when I needed this).

Ok, I'll generate identifiers myself.

#5 - 03/13/2018 10:46 AM - Evgeny Novikov

- Blocked by Feature #8754: Require unique job names added

#6 - 03/16/2018 01:55 PM - Evgeny Novikov

- Target version changed from 2.0 to 1.0

Let's hurry up this issue, since it is very high demanded, so, waiting for Klever [2.0](#) isn't good.

#7 - 05/23/2018 04:52 PM - Vladimir Gratinskiy

- Status changed from New to Feedback

Implemented in "new-report-data".

#8 - 06/07/2018 02:59 PM - Evgeny Novikov

- Status changed from Feedback to Resolved

This seems to work at least for a single instance of Bridge.

#9 - 06/08/2018 04:14 PM - Evgeny Novikov

- Status changed from Resolved to Closed

I merged the branch to master in [4339da97](#) as a part of branch *core-new-formats*.
