

Klever - Bug #8965

Get unknown error when opening page after dropping database

06/18/2018 04:27 PM - Evgeny Novikov

Status:	New	Start date:	06/18/2018
Priority:	High	Due date:	
Assignee:	Vladimir Gratinskiy	% Done:	0%
Category:	Bridge	Estimated time:	0.00 hour
Target version:		Published in build:	
Detected in build:	svn		
Platform:			

Description

The particular page is "<http://ldvdev:8998/reports/component/2798/unsafes/?attr>". Perhaps this issue exists for some other pages as well.

Updates.

Another page is "<http://ldvdev:8998/reports/component/2798/>".

What do you expect after dropping database?

#2 - 06/19/2018 12:57 PM - Evgeny Novikov

Let's consider entering this link manually. Of course I re-created the database.

Actually, if a given URL does not match specified patterns, Django returns page 404. Otherwise a page may be opened (if everything is okay) or there should be an error. In ideal that error should point out what is wrong (there isn't such the entity, the user hasn't an access to it, etc.). As far as I understand "Unknown error" means that there isn't sufficient error processing.

Let's fix this individual case, since doing this completely will take too much time and likely almost impossible.
