

Klever - Bug #8981

Visualization of error traces for generic:memory is broken

06/21/2018 10:34 AM - Evgeny Novikov

Status: Closed	Start date: 06/21/2018
Priority: Immediate	Due date:
Assignee: Vladimir Gratinskiy	% Done: 0%
Category: Bridge	Estimated time: 0.00 hour
Target version: 1.0	Published in build:
Detected in build: svn	
Platform:	
Description You can find an example of such the error trace and the screenshot with its visualization in attachments. Most likely this is related with recent changes in representing error traces by CPAChecker. But anyway Bridge either should visualize these error traces well or print warnings that their format is broken or not supported (we need to the latter as much as possible).

History

#1 - 06/25/2018 06:46 PM - Vladimir Gratinskiy

- Status changed from New to Feedback

- File 8981.png added

It works in current master for me. Tested in Chrome and Firefox.

#2 - 06/26/2018 11:37 AM - Evgeny Novikov

- Status changed from Feedback to Open

I identified the source of the issue. Indeed, this is a strange consequence of adding license headers. In particular, the issue is due to a comment at the top of `reports/templates/reports/ETV_HideLink.html`. I do not understand, why you do not see it, but perhaps there is some platform dependent behavior.

After moving content of this file to the only place where it is included, the issue has gone, but I am not sure that it is a proper solution, so, wait for the one from you.

Try to comment with "{# #}" everywhere in templates and without adding new empty strings. I didn't see the problem because I used master before comments were added there.

I checked with "{# #}" and it doesn't work.

#5 - 06/26/2018 04:00 PM - Vladimir Gratinskiy

With these license comments each include adds comment to the page. It is not good idea to add license to templates.

#6 - 06/26/2018 04:07 PM - Vladimir Gratinskiy

I've found the solution. Comment with "{% comment '<Comment name>' }<License>{ endcomment %}<template>" without adding new lines as I did it in "license-example" branch.

Great. Do users download these comments or they are completely truncated during templates processing?

They are truncated.

#10 - 06/27/2018 10:18 AM - Evgeny Novikov

- *Status changed from Open to Closed*

I fixed the rest license headers in [d8801fde](#). There was the only place where the license header caused bad visualization. In other places there are empty lines in templates already, so some more did not cause any issues. Anyway, to reduce page sizes I followed your advice to use template-style comments rather than the HTML ones.
