

Klever - Bug #9285

Problem with deployment

09/21/2018 12:47 PM - Pavel Andrianov

Status:	Closed	Start date:	09/21/2018
Priority:	Urgent	Due date:	
Assignee:	Evgeny Novikov	% Done:	0%
Category:	Deployment	Estimated time:	0.00 hour
Target version:	2.0	Published in build:	
Detected in build:	svn		
Platform:			

Description

Using the version 1.1, I can not prepare virtual machine with deployment scripts. The BenchExec archive is not extracted from .tar.gz and just renamed into BanchExec file. I do not sure, is it important bug or not, as I just faced with it on the old version.

History

#1 - 09/24/2018 01:12 PM - Evgeny Novikov

- Target version set to 2.0
- Priority changed from Normal to Urgent

I suggest the issue is trivial to be fixed.

#2 - 10/03/2018 03:19 PM - Evgeny Novikov

Besides, Anton revealed that description for Consul is also invalid in the configuration sample.

#3 - 10/09/2018 05:28 PM - Evgeny Novikov

- Status changed from New to Closed

I fixed the issue with Consul in [51cef7ae2](#) to master. Besides, I added support of Klever addons provided as ZIP archives (without that Consul wasn't installed even with valid configuration).

Regarding the issue with BenchExec, we revealed with Pavel that it stems from the manually installed Python3 that lacks lzma support. We can try to support this, but I am not sure that we need this as various issues will happen from time to time. Instead, I prefer to specify an additional requirement that Python3 should have lzma support.
